**Full service HPC**  
**Greatest mobility**  
**Any location**

## straesser DriveOn: mobile HPC for road testing – worldwide.

### The challenge:

Road tests of electric vehicles have to model all scenarios early on. The battery electric test vehicles have to be able to be charged anywhere, even in the most remote corners of the world, at all times.

### The solution:

straesser DriveOn – Mobile Electric Vehicle Charging. The mobile charging station with HPC is an all-inclusive solution providing you the entire charging infrastructure and can be permanently mobile on a trailer.

## Full service for road testing with straesser DriveOn.

With its mobile charging station DriveOn, straesser offers a full-service package for road testing electric vehicles. This includes providing the shipping container, transporting vehicles, conducting the test drives including providing drivers (also with local drivers for maximum cost effectiveness), and retrieving all components.

### Benefits of straesser DriveOn – Mobile Electric Vehicle Charging

**Location-independent:** The energy is supplied by either the public power grid or diesel generators.

**Cost-efficient:** The costs relate to the duration of the deployment and transport.

**Greatest mobility:** During road tests, the container can be transported by heavy-duty truck and stay there.

**Usability:** Use in hot, cold, and wet climates – the container has indoor temperature control.

**Flexible:** Simple to change locations. Fewer registrations and checks of power capacity are necessary.

**Logistics:** DriveOn may be shipped on an ocean-going vessel because of its 40-foot standard sea container.

#### More benefits:

- Full service: We offer you road testing for electric vehicles and the appropriate e-charging infrastructure.
- Parallel charging: Vehicles can be charged in parallel at two charging points with up to 300 kW each.
- Fast: The straesser DriveOn mobile charging stations can be rapidly deployed anywhere throughout the world.
- Environmentally friendly: straesser DriveOn contributes to making mobility climate-neutral and sustainable.
- Future potential: Refueling by and with hydrogen for future vehicle testing can be made available upon request.
- Adaptable: May be employed at events, festivals, driver experience events, and more.
